

## Ergonomics Optical Comparator -- Model COM10 --

This device is used for measuring distances between printed wiring traces and distances through insulation. It contains a reticle that has a linear scale graduated in metric units (Zero to 20mm). There is also a universal reticle supplied with the unit. Other reticles are available on request.

### Specifications:

- 10X magnification
  - Field of view: 25 mm. (1 in)
  - Working distance: approximately 50 mm. (1.9 in)
  - Lens: Glass
  - Height: 50 mm. (1.9 in)
  - Reticle is glass.
- **Installed reticle is a straight line scale.**
    - 0 to 20 mm, 0.1mm resolution.
  - **Second reticle is 0 to 10 mm. and the rest is English units**
    - 0 to 0.5 in
    - Radii and angles
