Scratch Tester Model ST10

The Scratch Tester, Model ST10, has been developed in accordance with product safety standards IEC60950 and IEC60065. It is used to determine the effectiveness of insulating coatings on printed wiring boards and anywhere the robustness of coatings is important.

The ST10 Scratch Tester has the pin and weight mounted on a carriage. The carriage can be moved in the proper direction by following the label on the side. When the travel for a scratch is complete, the tester is picked up and moved to the next location for scratching. This procedure is repeated until all the lines are complete.

Specifications

Pin point: 0.25mm radius
Angle: 40 degrees
Mass: 10 N
